

Replicator Licenses - Product Overview

DDM Multi-Site provides local database performance where companies are experiencing network performance and stability issues between national or international sites

Office to Enterprise PDM

The Database Replication works seamlessly alongside the Remote File Servers (RIFS) fully optimising multi-site, global performance.

Globalisation, off shoring and outsourcing is a reality for most organisations in order to reduce costs and maintain competitiveness in their given markets. DDM Multi-Site will allow you to work across multiple sites, giving you fast searching tools and access to the latest information.

Multi-site Database & file server replication, ensuring DDM grows with you

Key Benefits

- No suffering from slow internet connections
- Teams continue working if the network is down
- Increased ROI as your business grows
- Administrative cover from all sites
- Reduced duplication of products and documents
- Promotes product rationalisation and reuse

Key Features

- LAN performance in a WAN environment
- Any number of servers can be supported
- Configurable replication frequency
- Full database (metadata) and file server replication
- Full admin replication including user accounts
- Priority handling of conflicts with notification

The background of the slide is a dark blue world map with glowing yellow city lights and a network of white lines connecting various points across the globe, symbolizing global connectivity and data replication.

Increased ROI
as your
business
grows
